- 2) Veterinary Health Certificate from the Veterinary Authority of **United States of America** attesting that:
 - a) **United States of America** is free from Foot and Mouth Disease, African Swine Fever (ASF), Classical Swine Fever (CSF), Porcine Reproductive and Respiratory Syndrome (PRRS), Transmissible Gastroenteritis (TGE) and Aujeszky Disease in Swine.
 - b) The boar resides in United State of America for a minimum 60 days prior to collections of semen.
- 3) On the following diseases;
 - i) **Foot and Mouth Disease (FMD)**
the donor males:
 - i. showed no clinical sign of FMD on the day of collection of the semen and for the following 30 days;
 - ii. were kept for at least three months prior to collection in a FMD free country or zone where vaccination is not practised or FMD free compartments;
 - iii. the semen was collected, processed and stored in accordance with Chapters 4.6. and 4.7.
 - ii) **African Swine Fever (ASF)**
the donor males:
 - i. were kept in a country, zone or compartment free from ASF since birth or for at least three months prior to collection;
 - ii. showed no clinical sign of ASF on the day of collection of the semen
 - iii) **Classical Swine Fever (CSF)**
the donor males:
 - i. were kept since birth or for at least three months prior to collection of the semen in a country, zone or compartment free from CSF;
 - ii. showed no clinical sign of CSF on the day of collection;
 - iii. the semen was collected, processed and stored in accordance with the provisions of Chapters 4.6. and 4.7.

iv) Porcine Reproductive and Respiratory Syndrome (PRRS)

the donor males:

- i. were kept in a country, zone or compartment free from PRRS since birth or for at least three months prior to collection;
- ii. showed no clinical sign of PRRS on the day of collection of the semen;
- iii. the semen was collected, processed and stored in accordance with Chapters 4.6. and 4.7

v) Transmissible Gastroenteritis

the donor animals

- i. showed no clinical sign of TGE on the day of collection of the semen;

AND EITHER

- ii. the donor animals have been resident for at least 40 days on an artificial insemination centre, and all the pigs on this artificial insemination centre were free from clinical signs of TGE during the 12 months prior to collection;

and

- iii. for fresh semen, the donor animals were subjected to a diagnostic test for TGE with negative results during the 30 days prior to collection;
- iv. for frozen semen, the donor animals were subjected to a diagnostic test for TGE with negative results at least 14 days after collection;

OR

- v. the donor animals have been resident since birth in a country in which TGE is officially notifiable and no clinical case has been recorded in the previous three years;

and in all situations:

- vi. the semen was collected, processed and stored in accordance with Chapters 4.6. and 4.7

Licence AB No.

vi) Brucellosis

the donor animals:

- i. showed no clinical sign of infection with Brucella on the day of collection of the semen;
- ii. the donor animals were not vaccinated against infection with Brucella and either:
 - a) were kept in an artificial insemination centre complying with Chapter 4.6. and the semen was collected and processed in accordance with Chapter 4.7.;

OR

- b) were kept in a herd or flock free from infection with Brucella and tested every six months for infection with Brucella with negative results, and the semen was collected, processed and stored in accordance with Articles 4.6.3. to 4.6.5., and Articles 4.7.5. to 4.7.7.

vii) Aujeszky's disease

the donor animals:

- i. showed no clinical sign of AD on the day of collection of the semen;
- ii. were kept in an establishment or artificial insemination centre located in an AD free country or zone at the time of semen collection;
- iii. the semen was collected, processed and stored in accordance with Chapters 4.6. and 4.7.
